SENTIENT CITY SURVIVAL KIT

artifacts for survival in the near-future sentient city
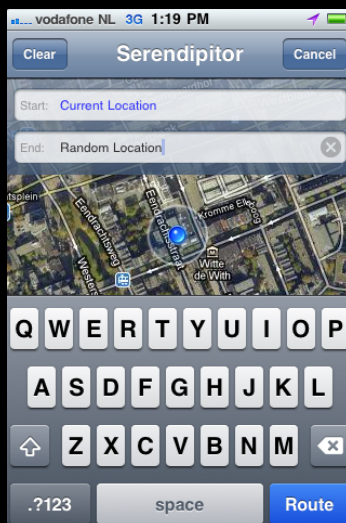

SERENDIPITOR   UNDER(A)WARE   AD HOC NETWORK TRAVEL MUG   CCD-ME-NOT UMBRELLA   { INFO }

1 / 6

In the near future, finding our way from point A to point B will not be the problem. Maintaining consciousness of what happens along the way might be more difficult. Serendipitor is an alternative navigation software application for mobile phones that helps you find something by looking for something else. The app combines directions generated by a routing service (in this case, the Google Maps API) with instructions for movement and action designed to introduce small detours and minor interruptions within an otherwise optimized and efficient route.
